EDUCATION

Vellore Institute of Technology

BTech in Computer Science Engineering, Specialization in Internet of Things

Vellore, TamilNadu

Sept. 2021 – July 2025

EXPERIENCE

Ethnus Consultancy Services Private Ltd 

Aug 2023 – Nov 2023

Externship

Remote

- Had Hands on experience on Web development concepts including **HTML, CSS, JavaScript**, and responsive designs.
- Developed front-end using frameworks like ReactJs, and back-end with Node.js, ExpressJs, and MongoDB, Worked in an Agile atmosphere, and used Git for version control.

PROJECTS

CRM SYSTEM | *HTML, CSS, JavaScript, Bootstrap, ReactJs, NodeJs, ExpressJs, MongoDB Group Project* Nov 2023

- Created a Full-Stack Web Application utilising React for the front end and Flask to serve a REST API.
- Used Mongo DB to store the customer data, used it as a DataBase, GitHub OAuth was implemented to retrieve data from user repositories
- Collaborated in an Agile setting, leveraging **HTML, CSS, JavaScript, and Bootstrap** for Frontend operations and **Node.js/Express.js** for backend operations.

REALTIME CHAT APPLICATION | *MongoDB, Expressjs, Reactjs, Nodejs, Socket.io*

Jan 2024

- Designed a dynamic and responsive user interface to facilitate real-time chat interactions with an intuitive user experience.
- Developed RESTful APIs to manage user authentication, chat data handling, and server-side logic for seamless communication.
- Implemented a database to efficiently store and retrieve user details, chat messages, and conversation history.
- Integrated Socket.io to enable instant message exchange and live chat updates.

BIGINT | *C++ OOPS*

Nov 2023

- Developed a C++ library that offers a reliable substitute for the conventional integer types that can handle arbitrarily large integers.
- To guarantee excellent performance and accuracy, the five fundamental arithmetic operations addition, subtraction, multiplication, division, and modular arithmetic were implemented.

IOT PROJECTS |

Sept 2024 - Nov 2024

- **SMART BLIND STICK** : Developed an IoT-based assistive device using Arduino and ultrasonic sensing to aid visually impaired navigation, with real-time feedback through a buzzer and LED. Designed for durability, low-power consumption, and user accessibility.
- **SMART IRRIGATION SYSTEM** : Developed an Arduino-based automated irrigation system with humidity and soil moisture sensors, optimizing water usage through automated control of a water pump. The system features a user-friendly 16x2 LCD for real-time monitoring, promoting efficient resource management in agriculture.

TECHNICAL SKILLS

Languages: C,C++,Basic Proficiency in Python, SQL

Technologies: HTML,CSS,JavaScript,ReactJs,MongoDB,Nodejs,Expressjs.

ACHIEVEMENTS

- * Achieved a **Experience points of 4460** on Code360 By CodingNinjas | 
- * Member of the Smile over Stress (SOS) VIT.

COURSEWORK

Data Structures and Algorithms | Object-Oriented Programming | Database Management System
